

Card-Present Credit Card Processing Solution For SAP

Point of Sale (POS) Card-Present Integration Challenges with SAP

SAP's Sales and Distribution module is not structured to integrate POS and payment processing within the standard order-to-cash workflow. Because of this, the ability to accept credit card payments and integrate disparate POS systems creates the following issues:

1. Implementation of in-house systems to address these integrations require a dedicated staff to maintain the system and updates
2. Integration of physical credit card swipe devices in a standard SAP ERP environment running without SAP's IS-Retail solution
3. Processing card-present authorization requests directly in SAP ERP brings the SAP ERP environment into the scope of a PCI audit resulting in increased costs and risks
4. Adoption of country specific POS credit card swipe devices results in disparate custom solutions which can be costly to maintain and may not scale seamlessly with future corporate expansion into new markets

The AGI Card-Present Communication (SAAS) Solution for SAP

Atrinity Group (AGI) provides a hosted solution which enables a secure, scalable, and cost effective solution for POS integration and credit card processing. In a hosted environment, AGI will manage the integration of any and all global POS devices with SAP. More importantly, AGI will be responsible for providing the communication solution to manage card-present credit card processing services which conforms to PCI standards. The AGI hosted solution eliminates the need to provide in-house staffing for on-going maintenance and support related to card-present processing.

Who is Atrinity Group (AGI)

Founded in 2005, AGI provides SAP consulting services with experience in providing solutions in multiple SAP modules and SAP industry solutions. Moreover, AGI developed the point of sale solution (CounterPart), which is a fully integrated point-of-sale solution for wholesale distributors and retailers running SAP without IS-Retail activation. AGI's experience will provide a SAP user with a proven cost effective solution.
