Point of Sale solution for companies of all sizes running SAP

CounterPart™ is an easy to use fully integrated solution for wholesale distributors and retailers running SAP as their back office ERP system.

CounterPart™ eliminates the need for duplicate data entry. SAP master data such as customers, credit limits, inventory, items, and pricing are seamlessly available in CounterPart.™ Sales orders, payments, and all related entries in CounterPart are available in SAP.

The base bar-code functionality supported by SAP is enhanced in CounterPart™. In addition, CounterPart supports standard receipt printers, cash drawers, and mag-stripe readers.

CounterPart™ is a innovative and scalable approach to the point-of-sale question. By reducing the total cost of ownership through simplification of screens which minimize the need for training and simultaneously leveraging your company's investment in SAP.

Intuitively easy to use Point of Sale solution for SAP

At Atrinity Group we are in the business of helping you get the most out of your investment in SAP software.

CounterPart™ was designed from the ground up to work with SAP by seasoned, experienced SAP practitioners. We are particularly focused on SAP solutions for the small-to-medium business space in the wholesale distribution and consumer product industries.

CounterPart™ is a full featured POS that includes Cash-Till-Management, Cash-and-Carry Sales, Will-Call Order Processing, On-Account Sales, Return Order Processing,, and Accounts Receivable Payment processing.

Multiple Forms of Payment

CounterPart™ supports all common forms of payment. Cash , credit, gift cards, coupons, and on-account billing. In addition it is very easy to apply split-payments across multiple payment methods on a single order.

Integrated Credit Card Processing

For credit card processing, CounterPart leverages SAP certified payment processing applications/ services. Specifically we have web service integration with the SAP credit card certified middle-ware provider's Delego Software and Paymetric. The middleware providers free the customer from being locked into a single financial institution.

Extended Bar Code Support

CounterPart™ supports SAP's mapping of bar-codes to multiple units-of-measure aligned with a single material automatically via the master data interface. In addition, the store personnel may easily add additional bar code relationships for a material.

Single Point of Entry Pricing

CounterPart™ has been designed to utilize native SAP pricing conditions. Pricing conditions utilized by SAP sales orders can also be leveraged directly by the CounterPart™ point of sale system. Price changes maintained in SAP are automatically interfaced to the store.

Customer Contact Management

Customer contacts aligned with a sold-to account in SAP can be issued 'bar-coded' key-fobs for easy and quick customer identification during order entry

On Account Customer Billing

Customer master records created/changed in SAP are automatically synchronized in the CounterPart™ system. Credit limits maintained in SAP are also interfaced to the register. CounterPart™ supports both dynamic and/or static SAP credit management configuration.

Cash Management

CounterPart™ Supports one-to-one and one-to-many cash drawer to register terminal alignment. All transactions related to a register drawer are tracked by time stamp, associate id, terminal , accounting periods and type of payment. There is a detailed end-of-day settlement and reporting system.

Receipt Printing

CounterPart™ prints receipts on traditional point-of-sale receipt printers and on laser printer paper. Receipt output methods can be used interchangeably.

SAP Inventory Management

CounterPart™ allows for the tight integration with the SAP MRP and material forecasting tools. Each sales order generated in the register is discretely interfaced to SAP. In addition , deliveries, goods issues, billing documents, and payments are all posted as part of the standard interface. This approach allows a company to easily leverage standard functionality in SAP for inventory planning, replenishment, and reporting.

Interface Strategy

CounterPart™ utilizes SAP standard IDOC API's for communications. We have extended the solution to fully automate transaction processing. We include a functionally rich interface transaction audit console that allows one to quickly address issues which may arise during transaction processing.
